

The SureColor SC-V7000 is Epson's first LED UV large format printer and allows sign and display makers to expand their portfolio of products.

The SC-V7000 offers exceptional image quality and the flexibility for you to print on a wide range of media. It's been developed for printing eye-catching indoor and outdoor signage, window displays, hoarding panels, packaging, promotional goods and decor products. It offers a versatile range of applications, which enable you to expand your product offering and deliver consistently high-quality results. This printer features Epson's unique UltraChrome UV ink configuration, including red, grey, white and varnish.

Deliver high-quality prints

This LED UV flatbed printer delivers outstanding print quality and vivid colours, as the UltraChrome UV 10-colour inkset enhances prints for stunning results. The white ink provides the versatility for printing on a wider range of products – either applied as a base layer on coloured media, or to create versatile backlit prints. Similarly, the varnish offers flexibility, as it can be applied all over the image or as a spot colour to accentuate specific textures and effects

Expand your product portfolio

Print onto a wide range of substrates up to 80mm thick, including: acrylics, polycarbonates, PVC, glass, aluminium, metal, polyester, foamboard, styrene, wood and stone. And with the 4-zone vacuum system, the SC-V7000 offers real production flexibility for you to offer customers additional products and services.

Stay productive

The SC-V7000 enables businesses to print at high speed with a maximum print area of 2.5 metres by 1.25 metres. The printhead layout enables simultaneous high-speed printing, with white ink and varnish, without losing productivity.

Epson innovation for usability

The printer automatically adjusts the printhead height depending on the media thickness and also includes a crash sensor to avoid potential head crashes. The ionizer helps eliminate and reduce the static charge on the media so that ink drops are not deflected, but land in the correct place, meaning that print quality is consistently maintained. The white ink circulation system sustains the ink at optimal quality, reduces waste and total cost of ownership.

KEY FEATURES

- **Outstanding print quality**
UltraChrome UV 10-colour inkset
- **High speed printing**
Simultaneous printing even when using white, colour and varnish
- **Maximum print size**
2.5m x 1.25m
- **Wide range of media**
To expand product offering potential
- **The complete Epson solution**
Including printheads, ink, firmware and software
